

Masters by Research Scholarship 2

Funded by Department of Sustainability and Environment, Victoria.

Proposed title

Policy mechanisms to support the private sector for the voluntary adoption of water sensitive and decentralised technologies

Research Stipend

\$25 000/year (tax-free) plus research and travel allowances. This scholarship does not cover International students fees. Information on these fees can be found at:
<http://www.monash.edu.au/study/coursefinder/course/0020/#details>.

Scholarship Tenure

2 years. (Note: part-time study is not available)

Social Research Overview

The successful candidate, while working closely together with another Masters student and the Department of Sustainability and Environment, will investigate the range of potential policy mechanisms designed to encourage voluntary adoption of water sensitive and decentralised water technologies in Melbourne. This social science research project will involve a thorough review of existing academic literature on policy studies to understand the range of potential policy mechanisms that could be applied in Victoria, and involve engagement with industry practitioners and interested community members. The research will contribute towards understanding the broad motivations of the private sector, particularly the building and construction industry, and the role of public sector organisations in strategically supporting more proactive investment in water sensitive technologies and design processes.

Student Requirements

Minimum of a second class honours degree or equivalent. Given the interdisciplinary nature of this research project a range of disciplinary backgrounds will be considered such as environmental science, geography, policy, natural resource management, social science, environmental engineering and civil engineering.

Supervisor / Contact

Associate Professor Rebekah Brown
Program Leader – National Urban Water Governance Program
School of Geography and Environmental Science, Monash University
